

We have developed our Smart Control System further to integrate onto the MUSTANG® Powered Wheelchair, creating an irresistible unit for children with special needs.

There is a choice of specialist control options, with the line following technology at the top end. This enables children who are not able operate a joystick to experience the joys of driving a Powered Wheelchair.

It is a great learning experience for the child allowing some freedom of choice as they begin to explore aspects of their surroundings that we may have taken for granted.

The Mustang seating unit offers the needed postural support, while retaining a composite appearance with everything designed to work together, electronically, mechanically and aesthetically.

Introducing the **Smart MUSTANG®**

MUSTANG

Introducing the **Smart MUSTANG®**

The Smart Line following system uses infra-red technology to follow a reflective line that is fitted on the surface of the flooring to create a route around a building. The user then only has to operate a single switch to drive the Power Chair around. The Smart MUSTANG® can also be fitted with anti-collision sensors for extra peace of mind – allowing more freedom for the user. The line following equipment is tucked away behind the user's feet – blending in with the appearance of the chair.

The SMART controls are mounted on the backrest of the Smart MUSTANG®. The unit has been blended in with the overall appearance to maintain the 'supercar' look. In addition to this system, we also offer other specialist controls such as:

- **Head Controls**
- **Chin Controls**

In addition to this system, we offer the **SMART PLATFORM**, which is used within special schools where there are multiple users. In this situation, the wheelchair is wheeled onto the platform and fixed into place, and the user can then drive from their seat.

The Mustang Device is a registered trademark of Activate - used here with their permission
